

I'm not robot!

Key Features Complete room solution provides wired and wireless presentation with AirMedia® 2.0 from laptops, smartphones, and tablet devices, while delivering enterprise-grade security and content encryption to protect privacy and ensure compliance with IT policies Use with optional Crestron Airboard® Whiteboard Capture System to display and share whiteboard content Integration with Appspace® digital signage software platform for content display when system is not in use HDMI® input provides wired connectivity for sources Customizable welcome screen provides clear instructions for presenters, displaying space availability, meeting details, and other messages on screen Natively integrates with Microsoft® Office 365®, Outlook®, and other calendaring applications as well as Crestron Fusion® room scheduling and enterprise management services Crestron XIO Cloud™ support enables remote provisioning and management Provides secure wired and wireless presentation in lounges, lobbies, and open spaces, and integrates with popular calendaring platforms. Easy to deploy and manage, increases workflow, and facilitates collaboration by turning underutilized spaces into productive meeting spaces. The Media Presentation System 200 (AM-200) provides secure wired and wireless presentation in lounges, lobbies, and open spaces, and integrates with popular calendaring platforms to maximize use. It is ideal for organizations with a dispersed workforce, open floor plans, and reliance on mobile devices to present. It is secure, easy to deploy and manage, increases workflow, and facilitates collaboration by turning underutilized spaces into productive meeting spaces while supporting the many different platforms and services employees and guests have on their personal devices. Connect and Present The AM-200 mounts invisibly behind a wall mount display and enables wired or wireless presentation with auto-switching. It features AirMedia 2.0 wireless presentation capability, an HDMI® input, HDMI output to the display (HD or WUXGA), and auto-on/off display control via CEC, serial, or IR. Connecting a source selects that input automatically and instantly displays the source image on the display. There's no programming required, no dongles to plug in, and no remotes to lose or batteries to replace. AirMedia Wireless Presentation Crestron AirMedia technology allows for wireless presentation of content from a personal computer, laptop, or mobile device via a Wi-Fi® wireless network. With AirMedia anyone can walk into the room with almost any device and connect without wires, enabling presentation of any content including Full HD video at frame rates up to 30 fps enabling users to interact and engage anywhere in the space. HDMI Connectivity In addition to AirMedia, the AM-200 includes an HDMI input for direct connection of a mini-PC or other local source, or a portable laptop computer via an optional wall plate or cable. The HDMI input supports HD 1080p signals.2 Native Appspace Functionality The AM-200 integrates with the Appspace content management application for digital signage which allows the AM-200 to show Appspace content on a connected display when a space is not in use. Works with Crestron Airboard® Whiteboard Capture System The AM-200 works with the Crestron Airboard® Whiteboard Capture System (CCS-WB-1) which allows whiteboard capture to be a part of the available sources for a user to interact with allowing for in-room and remote collaboration. Simply pair the CCS-WB-1 with the AM-200, and all of the CCS-WB-1 controls are available on the associated touch panel.3 Manage remote participants, start and stop a whiteboard session, route the whiteboard content to the associated display, and email a snapshot or timeline of the whiteboard session. Enhanced Onscreen Experience When no presentation source is connected, the AM-200 displays a customizable welcome screen on the room display with simple instructions for connecting and presenting. Integration with Microsoft Exchange (for users of Outlook® and Office 365®) or Crestron Fusion room scheduling allows the space's availability and details about the current scheduled meeting to appear on screen. As the meeting progresses, notifications appear periodically to indicate how much time is left in the meeting and what's scheduled next for the space. Pop-up messages, sent from Crestron Fusion, may also appear in the event of an emergency or other important announcement. Crestron XIO Cloud Provisioning and Management Crestron XIO Cloud service is a cloud-based platform for remotely provisioning, monitoring, and managing Crestron devices across an enterprise or an entire client base. It enables installers and IT managers to deploy and manage thousands of devices in the amount of time it would take to manage just one. Device settings can be configured without any hardware in hand, and are then pushed by the Crestron XIO Cloud platform to each device when it is connected to the service. Crestron XIO Cloud service facilitates daily management and monitoring of every device through a single dashboard with comprehensive reporting and logging, live status viewing and alerts, performance metrics and analytics, scheduled actions and updates, and more. As requirements grow and evolve, new features and functionality can be added easily to one or many devices at any time without ever going on site. XIO Cloud is a subscription-based service offering an adaptable SaaS (Software as a Service) solution with graduated levels of functionality and unlimited scalability. Crestron Fusion Room Monitoring AM-200 presentation spaces can be managed and centrally monitored through the Crestron Fusion enterprise management service. By adding an optional wireless occupancy sensor, the AM-200 can report and log when people are present in the space, turning the display on and off accordingly, and returning unused spaces to inventory to maximize availability for new bookings. Crestron Fusion software supports room scheduling, and can integrate with a variety of third-party calendaring applications. Usage data can be collected, and reports can be generated to help organizations optimize investments in space and technology. In the event of a technical issue, instant alerts notify the help desk to rapidly resolve problems and maximize uptime and workflow. Enterprise-Grade Security The AirMedia Presentation System is an enterprise-grade solution that can be deployed across hundreds of spaces, and set up easily using just a web browser, Crestron Fusion, or XIO Cloud. It employs standard network security protocols, including 802.1x network access control, Active Directory® authentication, and AES content encryption, to protect privacy and ensure compliance with your organization's IT policies. Add-on Control Options Manual control of the AM-200 can be enabled by adding a Crestron TSW-760 or TSW-1060 series touch screen. The touch screen provides a small-screen view of the room schedule and meeting details, with controls for input source selection, display power on/off, and display volume and mute, plus a help page. Additional control options include a wireless 4-button keypad (ZUMMESH-KP10AMBATT series4), which provides simple on/off and volume control, and a wireless occupancy sensor (ZUMMESH-PIR-OCCUPANCY-BATT) for enhanced automation and room monitoring functionality. The wireless keypad and occupancy sensor require the addition of the wireless AV Bridge accessory (ZUMMESH-AVBRIDGE), which connects to the AM-200 via USB. Ethernet 10/100 Mbps, auto-switching, auto-negotiating, auto-discovery, full/half duplex, TCP/IP, UDP/IP, DHCP, SSL, TLS, SSH, SFTP (SSH File Transfer Protocol), IEEE 802.1x, Active Directory authentication, HTTPS web browser setup and XIO Cloud client, 802.3af and 802.3at Type 1 compliant AirMedia (Via Ethernet) IPv4, mDNS, TLS, AES [1] USB Host USB 2.0 for optional Crestron AV Bridge (model ZUMMESH-AVBRIDGE sold separately) to enable wireless keypad control and occupancy sensing [4] USB Device USB 2.0 for computer console (installer setup and firmware update) RS-232 2-way display device control up to 115.2k baud with hardware and software handshaking IR/Serial 1-way display device control via infrared up to 1.1 MHz or serial TTL/RS-232 (0-5 Volts) up to 19.2k baud HDMI Input HDCP 1.4, EDID; Supports management of HDCP and EDID HDMI Output HDCP 1.4, EDID; Supports management of HDCP and EDID Mobile App OS Support Apple iOS, Android, Windows 7, Windows 8, Windows 10, macOS, Chrome OS Video Frame Rate Up to 30 fps, audio supported Full Screen Device Mirroring Shares the screen image and audio from an Apple iOS, Android, macOS, or Windows device Bitrate Peak 0.25 to 8.5 Mbps, variable depending on content complexity Bitrate Average 1.4 Mbps typical Input Signal Types AirMedia, HDMI (DVI & Dual-Mode DisplayPort compatible [2] ) Output Signal Types HDMI (DVI compatible [2] ) Maximum Input Resolution 1920x1080@60Hz (HD 1080p60), 4:4:4, 36 bit color depth Background & Logo File Support GIF, JPEG, PNG Audio Input Stereo Input Signal Types AirMedia, HDMI (Dual-Mode DisplayPort compatible [2] ) Output Signal Types HDMI Input/Output Format 2 channel LPCM Dimensions (Height x Width x Depth) 6.42 x 7.40 x 1.35 (inches) Weight 554 Grams Compliance UL Listed for US & Canada, CE, IC, FCC Part 15 Class B digital device
